KeyMacro is a freeware, which enables users to assign any special key combination to any action (such as adding the text or closing the active application). The application creates macros for a wide variety of actions, such as enabling/disabling mouse double-clicking, highlighting text and selecting text. You may assign the key to any of these actions or to create a completely new one that is not listed in the list of predefined actions. The project is able to create macros that use Shift, Alt, Control, or Windows keys, even in combination with mouse buttons, or hotkeys, and also it is able to take any of the existing hotkeys as a base for creating new ones. In addition, the program supports both hotkey macros for individual users and system macros for group users, which enables you to easily create macros and assign them to key combinations that are used by a group of users at once. The latest version of KeyMacro allows you to save the macros in the database, which makes it easier to access them after the program is closed. BEST SOFTWARE DESCRIPTION: 7 ELEVEN EMAIL ANALYSIS UNDETECTED SPAM SIGNALS BLACKHAT EMPIRES. Lite-Email Security is a powerful and comprehensive email security software solution.
