In this dialog, you will get a screen that has been categorized into subsections for each feature PSPP provides. These categories include search, filters, cracks, conversion, adjustments, and preview. The "before and after" comparison feature allows you to view two versions of the image together. You can then manually view the original and compare with the edited version before you finalize the changes. If you feel that you want to alter the changes, you can do so easily with the Adjustment or Layers tabs. The new tone-mapping options in Photoshop available in version 20.1 are implemented in the (TRA) as well as the (TONE) panel. With still photographs, the (TRA) panel allows you to adjust the highlights and shadows to maintain the image interest and the (TONE) panel allows you to capture a specific portion of the image. The setting offered under the (TINT) panel allows you to adjust the colors in a specific portion of the image. The task of capturing, segmenting and stitching layers become easier than ever with the new task module. Photoshop's task window has many different functions, but the 4-Spoke task window is the most intriguing. There are many tools in the 4-Spoke window that offer 4 different image editing functions, smart crop, direct selection, feathering, and blending. The options are not limited to any specific type of image. Hence, you can

easily crop any image, remove unnecessary elements and segment the image in multiple layers.
